Calculate  $50 * (4 + 6)$

function=calculator->{"expression": "50 \* (4 + 6)"}

Count the words in this sentence: AI agents can use tools intelligently

function=word\_counter->{"text": "AI agents can use tools intelligently"}

Evaluate  $120 / 5 + 3$

function=calculator->{"expression": "120 / 5 + 3"}

What is artificial intelligence?

Artificial Intelligence (AI) refers to the development of computer systems that can perform tasks that typically require human intelligence, such as learning, problem-solving, decision-making, and perception. AI systems can be trained on data to recognize patterns, classify objects, and make predictions or take actions. AI has many applications, including language translation, image recognition, and game playing, and is being
